censhare Features & Functions

Customer initially receives the Licensed Software in its Release 2023.1

The respective offer specifies which of the following generally available modules and functions Customer has licensed.

1 PLATFORM / CENSHARE BASE

1.1 Database Structure, Search Engine, Front End and API

Semantic Database Structure	 Achieves class leading performance with comparatively low infrastructure requirements
	 Rapid transaction processing of structured data (Online Transaction Processing – OLTP)
Search Engine	Full text search for all content and metadata
Fast search engine for all content and associated	 Multiple views with filters: list, gallery, card, column, relation and detail
metadata, including flexible filter functions	Smart, detailed, and expert search
	Smart, intuitive filters
	 Searches can be stored, organized, and shared
	 Detailed search dialog can be configured to show asset type- specific and role-specific elements
	 No query language knowledge required, even for complex searches
	 Rapid and complex searches in structured data via any criteria (Online Analytical Processing – OLAP)
	• Rapid searches in unstructured content, e.g., text (information retrieval), and combined with searches in structured data
Performance and Scalability	 Performance, stability, and low resource use with a modular structure for easy vertical and horizontal scaling
	Excellent single instance performance
	 Webpack methodology for fast delivery of static resources to users of the web client
Front End Technology Web-based client as rich	 HTML5, CSS3, JavaScript / TypeScript, Angular and AngularJS
Internet application to	Single page web application
support modern web browsers	 No installation of additional software or plug-ins
	Alternatively, a native Java based client can be used

APIs	 Client based and server-based file imports and exports
Import and export any file type as a digital asset by	 Complex export settings can be preset as 'output channels', including transformation operations and file generation
drag and drop, via automated processes or interfaces	 XML and JSON imports and exports with data mapping and data transformation
	 Automatic transformations into any XML format
	XML and HTML export, XML feeds
	• Import/export large media files or folders quickly and efficiently
	 Supports all file formats, including video, and metadata (XMP, EXIF, IPTC)
	 Bulk import and export via drag and drop
	Automated import and export
	Multi-level duplicate checks

1.2 Domain and Permission Management

Domain Management Functions for assigning digital assets and selected master data to specific users and user groups	 Users and user groups can be restricted to access and use just templates and content assets that have been approved for their domain Two independent domain trees available Flexible configuration to match business needs
File Management Manage physical files and their metadata within censhare and distributed file systems	 Separated storage of metadata and files: Metadata of assets are stored in the core database Files are stored in the traditional file system Distributed file systems supported Archiving and file replication supported Flexible assignment of keywords and tags to each file Offline database supported
User, Role, and Permission Management Manage permissions and functionality for users with individual roles and rights	 Granular permission management for roles and users Bespoke interface for administrators Control access to and editing of selected data, features and objects based on user, user role, user group, region, country and more User management uses the semantic database structure for flexibility when assigning user permissions
Multi Brand (optional)	Add business units, external clients, brands or subbrands to your censhare environment

1.3 Workspaces, Collaboration and Workflows

Workspace Management	 Six default user interface languages: US English, German, French, Italian, Japanese, Spanish
	 User workspaces save all changes that a user makes in that workspace
	 Workspaces can be defined for users, user groups and roles
	 Workspaces can be defined for users, user groups and roles Workspace settings will always be applied upon user log-in
	 Dedicated configurations for common use cases like DAM,
	PIM and Content Management, including pre-defined workspaces, data structures, roles, workflows, domains, users, master data and sample assets
Sharing, Collaboration	Check in/check out functionality
and Workflows	 Temporary download links with landing pages (optional)
Content focused collaboration across the	 Initiate a conversation on any asset and add recipients
organization	 Integrated collaboration features work seamlessly across web and desktop client
	 Integrated approval workflows with history log of approval interactions
	 Add sticky text notes to any asset with previews
	 View and change workflow statuses in a Kanban board view
	 Unlimited number of fully customizable workflows and sequential workflow steps
Security Features and settings to	Granular permissions define who can access or edit which assets
define user access rules,	Rights can be assigned to individual users or groups of users
password rules, timeouts, and backup schedule	 User rights managed through a bespoke administrator interface
	 Protected client versions without administrative features (optional)
	SSL encrypted client-server-communication
	Encrypted passwords
	Expiring passwords (optional)
	 User changeable passwords (optional)
	 Enforcement of best practice password policies concerning length, complexity, history, age, etc.
	Customizable requirements for password strength using regex
	 Password strength verification with immediate feedback to users
	Support for server-side creation and distribution of passwords
	Automatic log out of inactive users

	Regular backups that can be rolled back quicklySupport for external authentication via Keycloak
Insights	censhare Insights can provide aggregate usage information in an intuitive-to-use and easy-to-understand tool and present it via interactive charts and tables, for example for accounts, users, assets managed and system performance

2 Products

2.1 Digital Asset Management

Upload, Edit and Download Easily upload any content as a digital asset by drag and drop, via automated processes or via interfaces (APIs)	 Supports all file formats, including video and 3D Bulk upload and export via drag and drop Automated import and export Transfer of metadata (XMP, EXIF, IPTC) Multi-level duplicate checks
Manage, Organize and Archive Functions for managing, organizing, and archiving digital assets and associated metadata	 Flexible tagging and definition of features Automated versioning Integrated image editor Interaction previews for all relevant 3D file formats Image and video version generation Video conversion can be performed with FFmpeg, AWS Elastic Transcoder, or AWS Media Convert (additional cost may apply) Rule based archiving and dearchiving Management of different language, regional and content versions
DAM Starter Kit (optional) Extends censhare with a simplified, pre-configured user interface for censhare DAM	 Pre-configured user interface for DAM, including pre- configured master data and governance model with three top- level user roles Simplified user interface designed to cover a basic DAM use case for casual users or users who are not experienced in working with censhare Can be extended with additional asset types, relations, functions and user roles Workflows and user interface based on experience from DAM projects with leading global brands Simplifies creating an asset taxonomy with categories and keywords Can help deliver a DAM project faster Does not affect system performance

CI HUB Connector for censhare	Enables streamlined use of digital assets in applications of the Adobe [®] Creative Cloud [®] and Microsoft [®] Office [®] , Figma, Sketch,
(optional)	Google Workspace, Wordpress, and Sharepoint

2.2 Product Information Management

Product Data Integration	Interface to integrate data from any system through Pentaho Data Integration (see Connectivity Module)
Product Data Management Manages all product information and relates them to product groups, families and variants, and links product data with media and product descriptions	 Flexible product information structures Changes to product data can trigger user notifications and workflows In line processing of product master data Connections to all media assets Mass processing of product data Process based automation Manages product variants Integrated editor for mass data editing
Product Data Quality Checks the quality of product data to identify potential improvements	 Checks the completeness of product content and uses individual approval processes for checking data Configurable completeness checks, including quality gates and reports on quality gates Integrated workflows Versioning of all content
Product Data Export Publishes product content directly from the PIM solution to communication channels, or transfers product information to external systems	 Manual, partial or fully automated export to communication channels Provisions product content to external systems via XML feeds and APIs
Product Classification Management	Product classification based on industry standard GS1 GPC (Global Product Classification)

2.3 Content Management

Content Management	 Integrated content editor with output channel previews and word/character counter
	Multilingual standard document structure based on XML
	Variants for output channels with specific characteristics
	 Workflows, notifications, and automatic processes

	 Process control from brief to design to production across the complete content lifecycle
	Transform and export content to web, mobile, POS and print
	Flexible functions for content export to any other channel
	 Manual and automated publishing of posts on Facebook, YouTube, and Twitter
Neutral Content (XML)	Enables programmatic processing for different channels
Content is saved in media neutral, semantically	 Schema definition with RELAX NG, the high-performance schema description language for document-oriented content
labelled XML	 Option to integrate with Xeditor^(*) directly in censhare web for a seamless WYSIWYG editing experience of XML documents with support for custom schema definitions
	^(*) Xeditor is a 3rd party product for which separate license terms apply. The integration is available as an optional connectivity module in censhare version 2022.2 or higher.
Content Data Quality	Checks the completeness of content and uses individual
Checks the quality of	approval processes for checking data
content data for	Configurable completeness check
identification of potential improvements	Integrated workflows
	Versioning of all content

3 MODULES

3.1 Marketing Project Planning

Marketing Project Planning	 Create, edit, and visualize projects, task lists and tasks by start and end date
Functions to plan, manage	Transparent project overview
and visualize marketing projects and campaigns across the organization	 Detailed project planning and management down to task and resources levels
and with suppliers with a	Management and organization of deadlines and dependencies
full overview of all projects	Visual reporting including Gantt charts

3.2 Variants Management and Targeting

Variants Management	 Complex variants management and handling, including
Functions to create content	language variants and regional variants
variants based on defined target groups, including language variants, regional variants, and complex variant management	Creation of variants for targeted communication

Targeting	Dialogs for defining metadata targeting criteria
Functions to create context	Available for person, company, and target group assets
between target groups, information and content, and rules to deliver content	 Target groups can be referenced on products, contents, and information of any kind (articles, article variants, videos, etc.)
and content variants matching personal interests as defined in user profiles containing segmentation information	Flexible targeting rules

3.3 Localization and Translation

Translation Management	Translation support for Adobe® InCopy®, XML and Microsoft
Supports all locales through one user interface for all content and metadata translation tasks	Office documents
	 Translates content and metadata
	Automatic segment translation for regional content localization
	 Variations with regional and language specific characteristics
	Centralized workflow management
	 Word and character count for documents directly from the search results
Interface for Translation Management	Integration of external translation services via XLIFF interface
	 Integrated interface using the Translation Memory eXchange (TMX) specification allows automated, hotfolder based, high performance import from Trados, Across and Transit
DeepL Integration by	Translate any text right away without leaving censhare
Savotex Automated translations by DeepL, the leading AI service for translations (additional cost may apply)	 Translations will be related to the original text asset automatically
	Flexible integration into workflows
	Supports bulk translations
	 Can be combined with censhare's Translation Memory System to achieve highest consistency
	 Privacy through state-of-the-art encryption technologies and guaranteed data deletion after translation

3.4 Print Production Management

Print Production Management with	 Full Adobe[®] InDesign[®] integration, providing tools to create, edit and manage layout files for professional printing
Adobe [®] tools (requires Adobe [®]	Adobe [®] InCopy [®] integration
InDesign [®] Server license)	 Support for Adobe[®] InDesign[®] scripts

	 Backend renderer client to automatically create previews for Adobe[®] InDesign[®] files and to generate PDF files from Adobe[®] InDesign[®] files
	 Drag and drop placement of media, products, and other content
	Centralized workflow management
	Collaboration with comments, markers, and notes
Print Production Management with censhare tools (requires Print Production Management with Adobe [®] tools)	 Integrated page planning for layouts, adverts, and print sheets:
	 Flatplan Editor
	 Layout Editor
	 censhare InCopy[®] Editor to create, edit and manage texts, including comments, track, review, accept and reject changes, and displaying overset text and invisible characters

3.5 Web CMS

Web CMS Create websites to support specific marketing	Functions for centralized creation and management of single or multiple web sites with unrestricted or restricted access and with identical or different branding.
campaigns and programs, news, and media portals	This enables you, for example, to create and manage a website for a single brand, with several regional sites that use the centrally managed brand elements entirely or in parts. Each regional site can add or replace central content with regional or local content.
	Simple site administration
	Many standard widgets
	HTML, CSS, JavaScript support
	Flexible configuration, adjustable, and expandable
	 Creates and manages microsites, single sites, and multiple sites
	 Support for user generated content (UGC)
	Multiple locales/languages supported
	Simplified data model and templating
	Library of responsive HTML templates
	 Configurable page layouts and widgets
	Registration, login/permission system
	Integrated search
	Preview and download media assets
	Ensures the quality, consistency, and efficient maintenance of the content and overall appearance of the site

Share-Link Microsite (optional) Share digital assets for downloading on an individualized microsite with intuitive shopping cart	Microsite is shown before the actual download
	Preview images for download files
	Shopping cart function for download files
	 Available transformations can be selected by the user
	Flexible and extensible
	Can be customized with your brand elements

3.6 Headless CMS

Flexible Interface Reuse and publish content	 Let frontend developers use their favorite frameworks and tools to use censhare
to or pull content from any device or channel	No knowledge of censhare's internal data structures required
	 Delivery infrastructure scales easily and flexibly
	 Establish a system-to-system connection with the content management and production system server without additional satellite infrastructure
	 Controls for web browser caching behavior (images, download links)
	 Supports asset locking mechanism (check-out/check-in)
	Asset history can be accessed
Defining Entities	Entities and their properties are defined via JSON schemas
	 Schemas can be created, read, listed, updated, and deleted via the API
Entities	Entities can be created, listed, read, updated, and deleted
	Entities are returned as JSON
Queries	Queries are sent via HTTP GET or POST
	Queries are based on the schema data model
	 Queries can include operators ('&', ' ' and '!')
	 Relational queries are possible, e.g., articles of a specific author
	 Query results can include mixed entity types
Permission Management	Role based
	 CRUD permissions on entity type level
	 Primarily intended for administration and machine to machine
	 Authentication via HTTP basic authentication

Use Cases All use cases from Web CMS supported	 User based Entity level permissions Access only if user and entity share same permission group Authorization via JSON Web Token Functions for using censhare with a customized client Server to server communication Just data import from other systems Just data export to other systems Bidirectional communication between censhare and other
Headless CMS Client Starter Kit (optional)	systems Provisioning of a React framework that uses the APIs of the Headless CMS Module to connect to censhare, including:
Starter Kit, consisting of standardized building blocks to create customized extensions for censhare	 Media Room – a lightweight web application enabling external users to find and work with assets stored in censhare without requiring direct access to the core censhare system Default building blocks of the current Release Candidate of the Client Starter Kit Partner access to the source code via GIT Documentation <u>Note</u>: Installation and project specific customization will be charged separately.
Headless CMS Content Picker (optional)	User interface based on HCMS that can be embedded as a plug-in or extension into the frontend of a third-party web application
Enables content research and use in third-party web applications	 Search, explore and use assets stored in censhare without requiring direct access to the censhare system itself Supports full-text search with previews, intuitive sorting and filtering, and display of further information, e.g. metadata Visibility of content is restricted to assets and information that have been made available to the respective plug-in/channel User can select single or multiple files for import into the third-party application Third-party application can download the content from censhare or use a URL that references the asset in censhare Supports media assets like images and videos <u>Note</u>: Installation on third party system and project specific customization will be charged separately.

3.7 Connectivity

Fully integrated tools that extend censhare through external applications	 Designed and programmed by censhare, e.g.
	 Machine Learning and Artificial Intelligence for automated recognition of content and context for images and videos (Google Vision AI)
	 Enterprise content governance (Acrolinx)
	 Integration with desktop applications of the Adobe Creative Cloud, Microsoft Office, Google Workspace, Sketch, Figma (CI HUB)
	 Extended data integration, for example through Pentaho, a business intelligence solution that provides data integration, OLAP services, reporting, information dashboards, data mining and extract, transform, load (ETL) capabilities
	 Integration with Xeditor, the leading XML content editor for intuitive professional XML editing (requires censhare version 2022.2 or higher)
Connectors for exchanging data with	 Designed and programmed by certified censhare partners, e.g.
external applications to extend censhare	 MS Office Connector, by Emmet
	 Adobe Workfront Connector, by MSP
	 Dropbox Connector, by Columbus
	 SAP Commerce Connector, by kolb digital
	 Retail Modul, by MSP
	 MS Powerpoint Add-On, by Savotex
	 DALIM Connector, by w&co
	 Mediabox, by MSP
	 DeepL Connector, by Savotex
censhare Development API Developer API license for	 Enhance existing systems and processes by developing omnichannel applications, for example, to create customized reports and analyses
developing specific	JavaScript API
functionalities	Java API
